ABOUT ME

Computer Science Engineering student with a strong hand in Data Structures & Algorithms and Full Stack Web Development. I regularly practice algorithmic problem solving and have solved 80+ problems on LeetCode. Along with this, I manage real-time communication via WebSockets and gRPC alongside Web3 and Solidity development. I build web applications and backend systems using modern technologies such as Node.js, Express, MongoDB, HTML, CSS, and JavaScript.

EDUCATION

Bachelor of Technology: Computer Science and Engineering
Guru Ghasidas University

Expected Graduation: 2027
CGPA: 8.82

Relevant Coursework: Computer Programming, Python, Computer Organization and Architecture, Operating System, Digital Logic & Design, IoT, System Software, Software Engineering, Discrete Math, Rdbms, Parallel Computing, TOC

WORK EXPERIENCE

Intern | Shanti Anand Wellness Pvt Ltd | Bilaspur, India

Aug 2024 – Apr 2025

- Contributed to website design and development projects impacting community wellness initiatives, reaching hundreds of patients and caregivers across the region.
- Assisted in conducting online and offline technical and soft-skills training programs for staff, interns, and volunteers to improve team productivity.
- Collaborated on digital solutions to improve patient engagement and service delivery, enhancing the overall user experience on the wellness platform.

PROJECTS

Sehpathi | AI-powered Educational Web App

GitHub 🌐

- Built an interactive web platform helping students learn smarter via AI tools — text summarization, TTS, flowchart generation, and Excalidraw for collaborative diagramming.
- Implemented a modular architecture to handle multiple AI services efficiently, ensuring scalability and easy integration of future modules.
- **Tech Stack:** React.js, Firebase, TailwindCSS, Third Party AI API

XSentiment | AI-powered Sentiment Analysis Web App

GitHub 🌐

- Full-stack app for large-scale sentiment analysis on thousands of comments — classifying as positive, negative, or neutral using an NLP model with real-time pie chart dashboards.
- Built Node.js + Express backend optimized for batch processing, significantly reducing manual review time across high-volume comment streams.
- **Tech Stack:** React.js, Node.js, Express, Tailwind CSS, Recharts, Sentiment/NLP APIs

Real Time System Monitor | Uptime Monitoring SaaS

GitHub 🌐

- Built a real-time uptime monitoring system tracking 10+ services using Node.js, Express, and cron jobs for scheduled health checks and instant alerts.
- Developed secure backend with JWT authentication, REST APIs, and Redis caching, improving dashboard performance by ~40%.
- **Tech Stack:** React.js, Socket.io, Node.js, MongoDB, Redis, JWT Auth, Rate Limiting, Postman

TECHNOLOGIES

Languages: C, C++, JavaScript, TypeScript, Python, Solidity

Frameworks & Libraries: React.js, React Native, TailwindCSS, Expo, Next.js, Express.js, Firebase, WebSocket, Redux, GSAP, Prisma ORM

Tools: VSCode, Git, MongoDB, AWS, GitHub, Postman, OpenAI API, Vercel, OAuth, Expo, Render
