Bilaspur, India

SUMMARY

Full-stack developer with a strong backend mindset, building scalable web applications, real-time systems, and intelligent AI products. Designs robust APIs, optimizing system performance, and architecting production-grade applications using modern technologies like React, Node.js, MongoDB, Redis, and WebSockets. Driven by solving complex engineering challenges through efficient system design and modern technologies.

EDUCATION

Guru Ghasidas University (Central University)
B.Tech in Computer Science and Engineering; CGPA: 8.82

Bilaspur, India
2023 - 2027

EXPERIENCE

Full Stack Web Development Intern
Expertmind Technologies LLP

Aug 2024 – Apr 2025
Bilaspur, India

- Built and shipped website features for a wellness platform used by hundreds of patients and caregivers across the region.
- Ran technical and soft-skills training sessions for staff, interns, and volunteers.
- Partnered with the product team on UX improvements for the patient-facing service delivery flow.

PROJECTS

KuberFashion | *E-Commerce Platform*

[LINK](#)

- Engineered a scalable e-commerce platform with Kafka-based asynchronous order processing and Redis caching to handle high-throughput workflows efficiently.**
- Implemented secure authentication and authorization using Spring Security, JWT, and OAuth2.
- Deployed production infrastructure on GCP using Docker, ELK Stack, Flyway, and Cloudflare R2 for observability, scalability, and reliable delivery.

Real-Time System Monitor | *Uptime Monitoring SaaS*

[LINK](#)

- Built a production-grade uptime monitoring SaaS to track service availability, latency, and infrastructure health in real time.**
- Designed scalable monitoring pipelines using Node.js, Redis, Cron Jobs, and MongoDB to continuously monitor 10+ services with automated health checks.
- Implemented caching, authentication, rate limiting, and WebSocket-based alerting, reducing API latency by 40% and enabling real-time incident response.

Sehpathi | *AI-Powered Educational Web App*

[LINK](#)

- Engineered an AI-powered learning platform to improve student productivity through intelligent study tools.**
- Built modular AI pipelines for summarization, TTS, and flowchart generation.
- Integrated Excalidraw for collaborative real-time diagramming and visual learning

TECHNOLOGIES

Languages: C, C++, JavaScript, TypeScript, Python, Solidity

Frameworks: React.js, React Native, Next.js, Express.js, TailwindCSS, Redux, GSAP, Prisma ORM

Backend: Node.js, REST APIs, WebSockets, gRPC, JWT Auth, Rate Limiting

Databases: MongoDB, Redis, PostgreSQL

DevOps & Cloud: Docker, GCP, CI/CD, Cloudflare, Git, GitHub
